

FP CANADA™ BLUEPRINT: QAFP™ EXAMINATION

Introduction

The *FP Canada Blueprint: QAFP Examination* sets out the parameters as to what is assessed on the examination and the percentage value assigned to competencies as defined within the *FP Canada Standards Council Competency Profile (Competency Profile)*. *FP Canada Blueprint: QAFP Examination* guides test developers and the QAFP Exam Panel in the development of the QAFP examination and assists candidates in understanding what will be tested on the examination.

Every question on the QAFP examination focuses primarily on a specific element of competency from the *Competency Profile* and may also require integration across several financial planning competencies.

Examination candidates should use *FP Canada Blueprint: QAFP Examination* together with the *Competency Profile* to focus their studies.

Candidates are also expected to have proficiency in the Professional Skills included within the *Competency Profile*. Those competencies assigned as Professional Skills will be integrated into at least 12% of the examination questions.

The *Financial Planning Body of Knowledge* provides the listing of the technical knowledge necessary for proficiency as a QAFP professional. Knowledge is a fundamental expectation though it is not explicitly weighed on the examination in the same way as are the competencies; candidates will be required to sufficiently apply the knowledge necessary to demonstrate competence in the practice of financial planning throughout the examination.

Question Format

The QAFP examination consists of up to 100 multiple-choice questions. Questions will be presented as single independent items or as part of a case set of questions linked to a detailed case scenario.

Case Set Questions	20% – 30%
Independent Questions	70% – 80%

Duration

QAFP examination: 4 hours

Content

Content on the examination will be allocated by the elements of competency outlined in the *Competency Profile* and percentages are illustrated in the following images.

Financial Planning Functions

The following bar graph shows the percentage of content on the examination related to Collection, Analysis, and Recommendation and graphically illustrates the specific Core Financial Planning Competencies within each function. Refer to the *Competency Profile* for more information.

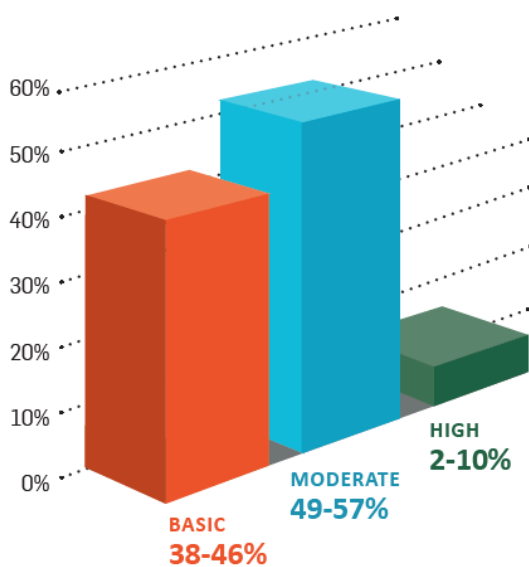

Financial Planning Areas

This pie chart shows the weightings for the seven Financial Planning Areas that span across all functions. Refer to the *Competency Profile* for descriptions.

Level of Complexity

The level of complexity generally increases as (1) the difficulty of the situation and information to process increases and (2) the number of variables to consider and the need to integrate different variables increases. Level of complexity is broken down into three levels for the exam questions: basic, moderate, and high and is visually represented in the following bar graph. The QAFP examination content focuses on general less complex financial planning situations in comparison to the CFP® examination.

Basic: 38% to 46%

Application of knowledge of various facets of financial planning to straightforward financial planning situations. Questions at the basic level focus on specific content areas and may require, for instance, basic calculations, evaluation across single or a small number of topics, or making simple recommendations.

Moderate: 49% to 57%

Application of knowledge in average financial planning situations with multiple variables. Requires the assessment and processing of a number of elements to identify a solution or formulate a recommendation. Questions at the moderate level focus on more complex situations and may require, for example, multistep calculations and the assessment and integration of multiple variables and interrelated factors.

High: 2% to 10%

High complexity is defined as the application of advanced knowledge of complex financial planning situations involving multiple variables and considerable integration to analyze situations and form recommendations.
